

Nala

HIV is a virus. Worldwide, this virus is the single largest killer of women of reproductive age.

Women, we cannot change the virus, BUT we can change our behavior! Join me in AVOIDING the following to help end to this epidemic:

- Having multiple sexual partners and having a partner who has multiple sexual partners.
- The high-risk behavior of anal intercourse.
- The high-risk behavior of sharing needles during drug use.

For me, monogamy is a safe choice. A committed marriage reduces my risk and is worth waiting for.
